

WALID MARZOUK

Full Stack Mobile Developer

@ walidmarzouk.dev@gmail.com 📞 +216 99 054 535 • Monastir, Tunisia

[in](#) [Linkedin](#) [🌐](#) [Portfolio](#)

Highly skilled junior software engineer with a strong background in mobile and full-stack development, specialising in Flutter and NestJS. Proven ability to architect and ship scalable, production-grade applications across multiple user roles. Experienced in building real-time systems and distributed backends, and in shipping mobile applications both android and ios, from initial conception through to publishing and production deployment.

EDUCATION

ESPRIT — Ecole Supérieure Privée d'Ingénierie et de Technologies 2022 – 2025

Engineering Degree, Software Engineering – Mobile Information Systems

ESPRIT — Cycle Préparatoire Intégré 2020 – 2022

Preparatory Cycle, Information technology

EXPERIENCE

ContinuousNet | **Full-Stack Mobile Developer** [View](#) ↗ Jan 2026 – Present

- Brought the end-of-studies messaging ecosystem to production: completed final integration, hardened the platform for reliability, and delivered it live across all client applications.
- Published and maintained two travel agency applications on the Google Play Store — TunisiePromo and Sunshine Vacances — delivering post-launch patches and feature updates.
- Developed Flutter features for traveller-facing apps — loyalty rewards, hotel room booking, and flight search — with emphasis on UI polish, component reusability, and code quality.
- Owned the NestJS hotel room booking engine end-to-end: domain modelling, business logic, service-layer design, and final API contract with robust validation.
- Designed and maintained a unified integrations layer normalising heterogeneous third-party APIs (flights, hotels, vouchers, booking providers) into a single stable contract, eliminating provider-driven regressions and reducing supplier onboarding risk.

ContinuousNet | **End-of-Studies Internship** [View](#) ↗ Jan 2025 – Jul 2025

Messaging Ecosystem for 3 Travel Agencies

- Architected a production-grade Flutter messaging SDK deployed across 12 mobile applications (4 per agency) — handling multi-tenant session management, clean architecture layering, and seamless integration into 3 distinct existing codebases.
- Delivered a rich real-time feature set within the SDK: E2E encryption, audio/video calls, live geolocation, offline mode, message translation, conversation summarisation, and an AI-powered travel assistant — all shipped within a 6-month internship.
- Engineered a distributed backend serving multi-agency traffic: NestJS orchestration layer, Matrix Synapse for encrypted real-time messaging, and PostgreSQL — designed for tenant isolation, security, and horizontal scalability across independent agency environments.
- Built a suite of AI microservices (FastAPI & CrewAI) covering intelligent response generation, conversation summarisation, and a context-aware travel assistant handling itineraries, recommendations, weather queries, and trip planning.
- Established end-to-end CI/CD pipelines via GitLab CI and Docker, enabling reliable multi-environment deployments across all agency applications.

Mouqawel — Freelance | Mobile Developer & Technical Lead [View ↗](#) 2024 (2 months)

- Designed and developed a complete Flutter application (30+ screens) from UX/UI through to full technical implementation.
- Integrated advanced Google Maps features including dynamic cluster management.
- Coordinated a team of frontend and backend developers.

Bisou Cafe — Freelance | UI/UX Design & Mobile Developer [View ↗](#) 2024 (1 month)

- Designed an immersive, artistic user experience aligned with the cafe's visual identity.
- Developed the Flutter application frontend with focus on UI quality, animations, and smoothness.

CondinGoat — Internship | UI/UX Design & Mobile Developer intern [View ↗](#) 2023 (2 months)

- Designed user interfaces with Figma.
- Developed the frontend of a Flutter e-commerce mobile application.
- Applied SOLID principles and Clean Architecture throughout.

ACADEMIC PROJECTS

AiRecruit — AI-Powered Recruitment Platform [View ↗](#) Academic Project

- Built a Flutter mobile application for two user roles: candidates applying to job offers, and recruiters managing pipelines and scheduling interviews.
- Developed a React.js admin backoffice: user management, application tracking, and recruitment analytics.
- Engineered AI-driven Flask backend features: job matching, candidate scoring, and application analysis.
- **Ranked 2nd at the ESPRIT Project Fair** out of all graduating engineering teams.

Earthwise — Environmental Awareness Platform Academic Project

- Built a fully cross-platform solution: Android (Kotlin), iOS (SwiftUI), and a web dashboard (Angular), all backed by a shared Node.js backend.

SKILLS

Languages: Dart, Java, Kotlin, Swift, JavaScript, TypeScript, Python, PHP, C, C++

Mobile & Frontend: Flutter, SwiftUI, Android SDK, React (basics), Firebase

Backend & APIs: NestJS, Express.js, Spring Boot, FastAPI, Flask, Symfony, REST APIs, WebSockets, Matrix/Synapse

Databases: PostgreSQL, MySQL, MongoDB, Oracle

State Management: BLoC, RiverPod, Provider, ValueNotifier

Architecture & Patterns: Clean Architecture, MVC, MVVM, Microservices, RESTful Design

Tools & Platforms: Git, GitLab, Docker, Figma, Grafana, WebRTC, Prometheus, Jenkins

LANGUAGES

Arabic: Native • **French:** Professional proficiency • **English:** Professional proficiency
